-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claim 10 recites the limitation "needle" in lines 5 and 6. There is insufficient antecedent basis for this limitation in the claim. The term "needle" is not positively disclosed in the claim language, and therefore, any reference to this term lacks antecedent basis.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by **Baier**.

Fig. 13

Fig. 14

The cited patent shows in figures 13 and 14, a body including an interface and a cannula, the cannula for extending and terminating in a vessel, the body for at least partial insertion into the bodily tissue at the point of insertion, the interface being the portion of the body which remains in contact with the bodily tissue adjacent the point of insertion while the device remains inserted in the bodily tissue. Importantly, the interface of this invention comprises of an exterior surface including texture where cells grow to form a barrier. Additionally, the cited patent also states in the abstract that the

Art Unit: 3763

cannula/catheter permits "tissue ingrowth which promotes healing and seals out sources of infection".

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-8 and 11-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Baier in view of Helfrich, Yamamoto et al. or Basta**. The Baier patent does not expressly disclose the use of texture that is rounded, pointed, or Knurling in shape. However, these shapes are conventional in the art as evidenced by the teachings of **Helfrich, Yamamoto et al. and Basta**.

The Helfrich patent shows in figures 3, 4, and 5, texture that is rounded, pointed, and Knurling in shape. Moreover, Yamamoto et al. and Basta demonstrate the conventionality of cannulas designed with frustoconical shapes. Accordingly, for a person of ordinary skill in the art, modifying the texture and shape of Baier, as taught by Helfrich, Yamamoto et al. and Basta, would have been considered obvious in view of the proven conventionality of these enhancements. Moreover, the use of frustoconical shapes would have helped reduce the trauma caused by the introduction of a cannula into a patient's body, and additionally, texture in the various shapes mentioned above, would have enhanced the stability of the cannula as it lays in the body of a patient.
